Networks in Peril Destruction, Subversion and Sabotage (XIXth-XXIth Century)

Benjamin G. Thierry and Valérie Schafer (ed.)

From the appearance of the word "sabotage" in France at the end of the nineteenth century - and its theorization notably by Emile Pouget (Albertelli, 2016) - through the destruction of communications infrastructures in times of war, to the spate of recent worldwide cyber attacks, infrastructure networks always possess a large number of vulnerabilities despite their diversity (information and communications networks, energy, banking, transport, engineering structures...). They may become prime targets for what they represent or because of the organizations that they support.

Are networks the subject of a particular technophobia, of a *misotechnie* (Jarrige, 2016)? Do they have specific or shared vulnerabilities (Baran, 1964; Abramovici and Bradley, 2009)? How are these vulnerabilities negotiated, evaluated and managed? How and why do networks become targets in conflicts? (Kempf, 2014; Pinsolle, 2015). Have the targets, issues, objectives and actors (Pasquinelli, 2010) fundamentally changed over time and are they different over space and between scales?

This special issue aims to explore projects and acts of destruction, subversion and sabotage of infrastructure networks in an interdisciplinary approach, and to analyse past and current vulnerabilities and attempts to overcome these.

Submissions

Please submit proposals for papers to both benjaminthierry@gmail.com valerieschafer@wanadoo.fr

Initial proposals should be one page long, outlining the specific focus and approach of the paper and providing a short bibliography.

Selected authors will then be invited to submit a full paper which will undergo full peer review before acceptance for publication.

Timetable

Deadline for the submission of proposals: May 15th 2018 Notification of proposal acceptance: June 15th 2018 Submissions of full papers (8000 words): October 15th 2018
